**Ref:** Fusion Energy & PowerMasters™ Electronic Games Series

Dear Mr. Hamlin:

Recently Pat Boone wrote you a letter regarding our efforts in demystifying fusion energy and the need to develop and commercialize it soon. The **Time Magazine** article on fusion as published last Friday <http://fuelfuture.com/inside-the-quest-for-fusion-clean-energys-holy-grail/> shows that private enterprise fusion firms have the potential of demonstrating and even commercializing fusion before ITER <https://www.iter.org/> finishes its regimen of experiments. Tri-Alpha Energy is highlighted in paragraph 5. The New York Times published a similar article Sunday at: <http://fuelfuture.com/start-ups-take-on-challenge-of-nuclear-fusion/>

Our latest published article ***“Fusion Energy; Too Important To Fail – Too Big To Hoard”*** at <http://fuelfuture.com/fusion-energy-too-important-to-fail-too-big-to-horde/> points out that fusion is a very arcane subject to the general public, politicians, and many scientists outside the fusion community. Tri-Alpha Energy is one of the star start-ups used in the article as a case in point.

Fusion in many ways is the exploration of inner-space. The **Time Magazine** article mentions Dr. Rostoker’s (founder of Tri-Alpha Energy) insistence that research with high energy particle accelerators would have led to quicker fusion. Unfortunately the U.S. gave up its lead in high energy physics when it canceled the superconductor collider center in Austin Texas in the early 1990s.

Our intent is to make the exploration of inner-space and the development of fusion America’s project. The moon landing of the 21<sup>st</sup> Century, if you will. We want all Americans to be involved.

We plan to produce a hit electronic interactive game called **PowerMasters™**. The monetization and revenue model is based on Candy Crush Saga. This is described on our EnergyCite® website at: <http://www.energycite.com>

Revenues from the games along with significant revenues resulting from licenses granted to utility companies nationwide to practice our patents covering the “utility smart meter” [see: <http://energycite.com/ip.php> ] will be invested into a fusion energy consortium as described in the concluding section of the article mentioned above <http://fuelfuture.com/fusion-energy-too-important-to-fail-too-big-to-horde/>. This is explained in the Tamarkin article’s conclusion section, numbered points 1-14.

The video game franchise will be a winner in the business sense. As importantly they will create tremendous societal value, teaching people important lessons in science, energy, money, and values.

We wish to speak with you as soon as possible about your potential involvement with the games series. Our game design team leaders are impressed with your work in **God of War !!** and Perseus. See their background at: <http://energycite.com/gamers.php>

An overview of our PowerMasters™ Game Series is provided at: <http://fuelfuture.com/power-masters-game-series/>

More detail is provided on the EnergyCite® website at: <http://energycite.com/pt.php>

Our designers would also like Dr. Edwin (Buzz) Aldrin’s involvement and there is a section of the games built around travel to Mars and home again based on fusion propulsion, something NASA has long considered. Our understanding is that Dr. Aldrin also is a Tri-Alpha Energy participant. He is passionate about Mars Travel.

When you have a chance please call or email Tom Tamarkin at 916-482-2000 Ext. 142 or 916-482-2020 cell to discuss this further. Our email addresses are below the signatures.

Thank you and we look forward to hearing from you soon.

Sincerely,

Tom Tamarkin
